SOLBERG

Don't just wet EXTINGUISH WITH FOAM

Firefighting foam is a superior solution, acting as a force multiplier. When used appropriately for the correct application, foam:

- Improves water's wetting ability ten-fold
- Extinguishes fire faster
- Greatly reduces overhaul and mop-up time
- Increases firefighters' protection
- Maximizes operational efficiency
- Conserves valuable water resources
- Is highly effective for exposure protection
- Mitigates and suppresses vapors

SOLBERG - A FOAM FOR EVERY APPLICATION

When the fire alarm sounds, adrenaline spikes, and you move without question. You are a first responder and people are depending on you to extinguish the fire, to protect property, the environment — and, most important, to save lives. Having the right tools to get the job done safely and effectively is crucial.

THE QUESTION IS: ARE YOU TRULY PREPARED FOR TODAY'S FIREFIGHTING CHALLENGES?

Communities are growing; industries and businesses are using new technologies; more hazardous materials are transported through cities and towns; and budgets for resources are tight. These are the difficult challenges you face as a firefighter. It's imperative you have the right tools to optimize the limited resources you have available in those critical moments. You need products that perform and are also firefighter friendly.

At Perimeter Solutions, we get it. We've put in more than 40 years developing foam concentrates designed to work effectively on different classes of fires. SOLBERG foam concentrates are exceptional firefighting tools for flame knock-down, fire control, extinguishment or vapor suppression — all of which are paramount to firefighter safety. If you aren't safe, neither are the people depending on you.

FIREFIGHTER SAFE. ENVIRONMENT FRIENDLY. **Class A & B fires**

The first true, effective fluorosurfactant and fluoropolymer-free foam, SOLBERG RE-HEALING[®] Foam is safe for firefighters and environmentally sustainable. Available in a variety of concentrates, it has superior vapor suppression, rapid resealing characteristics, and long drain time for better burn-back resistance.

Designed for use on Class B fuel fires and to replace traditional AFFF, FFFP foam concentrates and older protein and fluoroprotein foams, RE-HEALING® Foam can be used to prevent re-ignition of a liquid spill and control hazardous vapors. On Class A fuels, it will improve extinguishment in deep-seated fires.

Available in 1%, 3%, 6%, 3x3% ATC®, and 3x6% ATC® concentrates.

RE-HEALING TF, Training Foam also is available. Designed for firefighter training ONLY, it is intended for extinguishing only controlled Class B fires. This foam is not intended for use on actual fires.

TAKES THE WILD OUT OF WILDLAND FIRES. **Class A fires**

SOLBERG FIRE-BRAKE™ foam concentrate substantially increases water's overall wetting capability. This maximizes penetration, resulting in greater fire control when attacking combustible Class A fuels.

Designed for wildland, structural and other Class A fires, including wood, paper, coal, and rubber, FIRE-BRAKE™ foam concentrate is U.S. Forest Service Qualified Products Listed (QPL).

Proportioned at 0.5% to 1.0%, application rates may vary based on hazard or terrain.

STOPS FIRE IN ITS TRACKS. **Class B fires**

The first U.S. EPA Stewardship Program - 2015 Compliant C₆ foam concentrates, SOLBERG ARCTIC[™] AFFF and AR-AFFF ATC[®] foam concentrates are synthetic foams used to effectively extinguish Class B hydrocarbon and polar solvent fuel fires. ARCTIC™ AFFF and AR-AFFF foam concentrates can be used for rapid extinguishment or vapor suppression.

Available in 1%, 3%, 6% AFFF, 1x3% ATC®, 3x3% ATC®, and 3x6% ATC® concentrates.

No additional **EQUIPMENT NEEDED**

Foam non-air aspirating discharge devices as well as airaspirating discharge devices can be used to obtain maximum results. SOLBERG foam concentrates can be proportioned at the proper foam solution percentage using common foam hardware devices such as:

- Line eductors
- Self-educting nozzles
- Low and medium expansion devices
- Handline nozzles
- Branch pipe nozzles
- CAFS

Compatibility

SOLBERG foam concentrates should not be mixed with other foam concentrates, unless otherwise tested for compatibility. For questions about compatibility or mixing foam concentrates, consult SOLBERG Technical Services.

How foam works

SOLBERG foam is made up of three component parts: foam concentrate, water, and energy. Energy can take the form of air or mechanical agitation. When energy is added to a foam solution (foam concentrate mixed with water), finished foam is produced through a discharge device. The finished foam is very fluid and readily flows over liquid or solid surfaces to extinguish fire by:

- Excluding oxygen (separates fuel from vapor)
- Cooling fuel surface (water content of foam)
- Separating flame from fuel source
